

Skyriders rope in another Mali contract

Project: Rope access inspection services

Client: Société des Mines Syama Mali

Location: Mali

Skyriders, a South African rope access specialist, has been awarded a second permanent appointment at Syama Gold Mine in Mali.

Skyriders was contracted by Société des Mines Syama Mali for a routine inspection of a replacement smokestack which Skyriders had helped to erect in 2013.

The scope of the company's work includes inspecting the external and internal components of the structure, a task that takes four days to complete. During the inspection, the team visually checks the stack and uses ultrasonic meters to test wall thickness. Findings are then submitted to an external consultant for final reporting.
